Bytedance

Site Reliability Engineer

San Jose, California, USA

October 2025 - September 2026

- Ownership of kubernetes clusters across Oracle, Linode, AWS, and GCP cloud vendors.
- Onboarded Linode as a cloud vendor: isolated vendor gaps in ipv6 ULA support, host-level OS building, networking ACLs, and machine provisioning integrations.
- Eliminated dependency on OCI egress infrastructure by routing requests from collocated data centers to OCI on 400G private links.

RingCentral

Site Reliability Engineer

Belmont, California, USA

May 2021 - July 2025

- Monitoring & Observability
 - Maintained largest client-side monitoring stack not owned by monitoring team: Thanos as a query layer, Prometheus deployed to kubernetes in both agent and stateful modes, Alertmanager integrated with upstream alarm sinks, and Grafana deployments with monitoring as a code in multiple environments.
- Container operations
 - Supported virtualization efforts of all product teams across several virtualization layers: dockerd on VM, serverless containers in AWS, containerd on both cloud-administered and on-premise Kubernetes. Satisfied security patching compliance requirements for FedRAMP applications including image signing by US citizens, multi-architecture image builds, and vulnerability remediation timelines.
- Security hardening & compliance
 - Introduced vulnerability management pipelines as part of FedRAMP controls: remediating critical and high CVEs within 30 days for standalone VMs, container images, and clustered kubernetes nodes. Hardened Amazon Linux 2 & 2023 operating systems to CIS L2 standards.
- Platform engineering
 - Empowered business teams to be self-sufficient through several platforms: deployment platforms to kubernetes using a GitOps workflow on gitlab runners, ArgoCD, and Kustomize; monitoring as a code platform for prometheus metrics scraping, pagerduty alarms, and grafana dashboards; multi-architecture build pipelines using base images, buildkit, and gitlab runners.
- On-call & Incident Response
 - Acquired 4 years of experience in incident response as a Scribe, Subject Matter Expert, and Incident Commander, mitigating RingCentral's longest service outage, which was caused by exhausted conntrack tables in two nodes out of several hundred.

TECHNICAL SKILLS

Programming: Go, Bash, Python.

Infrastructure/Configuration as a code: Terraform, Terragrunt, Ansible, Packer

Container technologies: Docker, Containerd, Buildkit, Kustomize, Helm, Kubernetes, CNI, CSI, OCI

Cloud providers: Amazon Web Services, Google Cloud Platform, Akamai Linode, Oracle Cloud Infrastructure

Monitoring/Logging: Thanos, Prometheus, Fluentd, Grafana, Kibana

CI/CD: Gitlab CI, ArgoCD, Spinnaker

Languages: Mandarin Chinese, English

PROJECTS

Hybrid cloud email system

- Hybrid cloud email system which supports creating "unlimited" email addresses.
- Utilizes AWS Simple Email Service (SES) as SMTP server, Dovecot as IMAP server, S3 as email storage backend, SNS as notification mechanism to trigger email retrieval.

EDUCATION

San Jose State University

Master of Science - Software Engineering. Part-time instructional student assistant.

San Jose, California

May 2021

University of California, Santa Barbara

Bachelor of Science - Computer Engineering. Focus on ASICs and embedded systems.

Santa Barbara, California

June 2013
